

INTERNSHIP WEEKLY REPORT

NAME : JIBISHA JOSHY

REPORTING PERIOD : 13/03/2023 – 24/03/2023

Started working on Token Management Module.ith have 5 execution steps

1. User makes a request by providing necessary login credentials.
2. This request has been processed and verified by granting user an access token.
3. Access token submitted to browser grant the user access session.
4. The authentication tokens are stored for further.

Set a timeout expiration for generated token.

- Set up a react.js project and created 2 components
- Generated tailwind.config.js file & postcss config.js file:
- Npx tailwindcss init -p
- Configured tailwind.config.js file by adding module.
- Exported by content array object.
- Created dashboard component.
- User access dashboard page,provide username & password in login form it will create a request & fetch authentication token.
- Created login component.
